

Solution Requirements

Date	11 July 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Allow users to securely access the application and maintain session history.	High
2	Event Analysis	Analyze networking event descriptions using Google Gemini AI and identify important topics.	High
3	Conversation Starter Generation	Generate personalized conversation starters based on event details and user interests.	High
4	Fact Verification	Verify networking-related information using AI before presenting results to users.	High
5	Contact History Management	Save previous conversations and networking interactions for future reference.	Medium
6	Dashboard	QDisplay event analysis, AI suggestions, and networking history in a user-friendly dashboard.	Medium
7	Reporting	Generate summaries of user interactions and networking activities.	High
8	Error Handling	Display meaningful messages when API requests fail or invalid input is received.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Generate AI responses within acceptable response time.	Response time < 3 second
2	Scalability		Supports up to 500 concurrent users; deployable via Docker on cloud platforms.
3	Security & Data Privacy	Encrypt API keys, validate user input, and secure all communications using HTTPS.	Zero exposed secrets
4	Reliability & Availability	Continue functioning with graceful error handling if the Gemini API is temporarily unavailable.	99% uptime target; fallback messages displayed on API errors within 5 seconds.
5	Usability & Accessibility	Provide an intuitive and responsive interface for students and professionals.	Usable by students aged 14+; responsive on mobile, tablet, and desktop screens.
6	Other (Maintainability)	Follow a modular project structure with proper documentation and comments.	Code coverage > 70%; README with setup instructions; modular file structure maintained.
