Project Proposal (Proposed Solution) Report

Project Overview	
Objective	To develop an AI-powered Networking Assistant that helps students, job seekers, and professionals build meaningful professional connections by providing intelligent networking guidance. The application analyzes networking events, generates personalized conversation starters, verifies professional information, recommends follow-up actions, and maintains networking history using Google Gemini AI.
Scope	The Networking Assistant is a lightweight AI-powered web application built using Python, FastAPI, Streamlit, SQLite, and Google Gemini API. It assists users before, during, and after networking events by offering event analysis, AI-generated conversation suggestions, contact management, follow-up recommendations, and networking insights.
Problem Statement	
Description	Students, job seekers, and professionals often face challenges during networking events because they struggle to initiate conversations, remember important information about contacts, prepare relevant discussion topics, and maintain follow-up communication. Existing networking platforms primarily facilitate connections but lack intelligent AI-driven guidance for effective professional networking.
Impact	Addressing these challenges will improve users' confidence in networking situations, strengthen professional relationships, increase career opportunities, and enhance communication skills. The solution reduces networking anxiety while helping users build long-term professional connections through personalized AI assistance.
Proposed Solution	
Approach	The proposed solution integrates Google Gemini AI with a FastAPI backend and a Streamlit frontend to deliver intelligent networking assistance. The application analyzes networking events, generates personalized conversation starters, verifies professional information.
Key Features	● AI-Powered Event Analysis ● Personalized Conversation Starter Generation ● Intelligent Fact Verification

	● Contact & Networking History Management ● Smart Follow-up Recommendations ● Professional Communication Assistance

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Processor	CPU specification	Intel i3 / i5 or higher
Memory	RAM specification	Minimum 4 GB (8 GB Recommended)
Storage	Disk space for data, models, and logs	10 GB Free Disk Space
Network	Connectivity requirement	Internet Connection Required
Software		
OperatingSystem	Supported platforms	Windows / Linux / macOS
Frameworks	Backend framework	FastAPI (Python 3.10+)
AI Service	Generative AI provider	Google Gemini API
Development Environment	IDE / Editor	Visual Studio Code / PyCharm
Version Control	Source control & hosting	Git & GitHub
Data		
Database	Source, format	SQL / PostgreSQL / SQLite
