

Project Executable Files

Date	11 July 2026
Team ID	-
Project Name	Networking Assistant – AI Powered Networking Companion
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	No

Step 2: File / Folder Structure

Overview of the project's file and folder structure:

/NetworkingAssistant	- Root directory of the project
/app	- Application source code
main.py	- Streamlit app entry point
gemini_service.py	- Google Gemini API integration
auth.py	- Authentication and session management
db.py	- Database connection and operations
utils.py	- Utility functions
/templates	- HTML templates (if any)
index.html	- Landing page template
login.html	- Login page template
dashboard.html	- Main dashboard template
history.html	- History page template
feedback.html	- Feedback page template
/static	- Static files
style.css	- CSS styles
script.js	- JavaScript files
/tests	- Unit and integration tests
test_service.py	- Tests for Gemini service
test_main.py	- Tests for main app
/data	- Database and seed files
schema.sql	- Database schema
.env.example	- Sample environment variables
requirements.txt	- Python dependencies
README.md	- Setup and run instructions

Project Executable Files

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed
Login Credentials (Demo)	Use any email & password to sign up
Platform / Hosting Provider	N/A
Repository Link	(Your GitHub Repository Link)
Demo Video Link	(Your Demo Video Link)

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run the project locally:

Pre-requisites: Python 3.10+, pip, Git, and a valid Google Gemini API key.

Step 1:	Clone the repository: git clone <repository-link>
Step 2:	Create and activate a virtual environment: python -m venv venv
Step 3:	Install dependencies: pip install -r requirements.txt
Step 4:	Copy .env.example to .env and add your key: GEMINI_API_KEY=your_api_key_here
Step 5:	Start the application: streamlit run app/main.py
Step 6:	Open a browser and navigate to: http://localhost:8501

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Response time depends on Google Gemini API latency.	Request timeouts and caching implemented.
2	User authentication is basic.	Role-based access control planned.
3	History storage is limited to local database.	Cloud database integration planned.
