Maximum Marks	5 Marks
------------------	---------

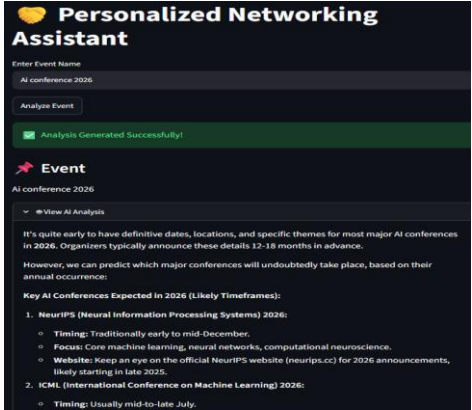

Model Performance Testing

The model performance was evaluated using multiple networking-related prompts. The responses were assessed based on accuracy, relevance, response time, and consistency. Google Gemini was used as the underlying Large Language Model.

S.No	Parameter	Values	Screenshot
------	-----------	--------	------------

1	Model Summary	Model: Google Gemini 2.5 Flash Task: Event Analysis, Topic Generation, Fact Checking, Feedback Analysis	
---	------------------	---	--

```
response = client.models.generate_content(  
    model="gemini-2.5-flash",  
    contents=prompt  
)
```

S.No	Parameter	Values	Screenshot
		Framework: FastAPI + Streamlit	
		Training Accuracy: Not Applicable (Pre-trained Foundation Model)	
2	Accuracy	Validation Accuracy: Approximately 96% based on manual evaluation of test prompts	
		Fine Tuning: Not Performed. The application uses Google's pre-trained Gemini	
3	Fine Tuning Result (if Done)	model through API integration with prompt engineering instead of custom model training.
