

Functional & Performance Testing Template

Model Performance Test

Date	11 July 2026
Team ID	
Project Name	Networking Assistant – AI Powered Professional Networking Assistant
Maximum Marks	5 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Event Analysis	Enter event description and click Analyze	Relevant networking themes generated	The application successfully analyzed the networking event and generated relevant themes without errors.	Pass
FT-02	Topic Generation	Click Generate Topics	Meaningful discussion topics generated	AI generated meaningful networking discussion topics based on the event description.	Pass
FT-03	Fact Checking	Enter statement	Fact verification	The fact-checking	Pass

		and verify	returned	module successfully verified the input statement and returned an appropriate explanation.	
FT-04	Feedback	Submit rating and comments	Feedback saved successfully	User feedback was submitted successfully and stored without any errors.	Pass
PT-01	Response Time	Measure API latency	Below 3 seconds	Average API response time was approximately 1.3 seconds , which is within the expected limit.	Pass
PT-02	Concurrent Requests	Send multiple requests	System remains stable	The application handled multiple concurrent requests without crashing or significant performance degradation.	Pass
PT-03	History Module	Open History page	History retrieved successfully	Previously stored networking history was	Pass

				retrieved successfully .
