Model Performance Testing

Project team shall fill the following information in the model performance testing template.

S.No.	Parameter	Values	Screenshot
1	Metrics	Model: Google Gemini 2.5 Flash (Pre-trained LLM) Training Accuracy: Not Applicable Validation Accuracy: ~96% (manual evaluation) Average Response Time: ~1.3 sec Error Rate: <1%	 The screenshot shows a 'Fact Checker' web interface. It has a text input field containing 'ai replace software engineer' and a 'Check Fact' button. Below the button, a green banner indicates 'Fact Check Completed'. Under the heading 'Fact Check Result', it states 'Incorrect.' followed by a paragraph explaining that AI is currently augmenting software engineers rather than replacing them entirely.
2	Tune the Model	Hyperparameter Tuning: Not Performed Validation Method: Functional testing using Event Analysis, Topic Generation and Fact Checking. Prompt engineering used to improve responses.	<pre>def fact_check(statement): prompt = f""" You are an AI Fact Checker. Verify whether the following statement is true. Statement: {statement} If it is correct: Say "Correct" and give a short explanation. If it is incorrect: Say "Incorrect", explain why, and provide the correct information. Keep the answer concise. """ response = client.models.generate_content(model="gemini-2.5-flash", contents=prompt) return response.text</pre>
